

*“If it was not for the commitment and thought leadership provided by the Atlantic County Economic Alliance, we would never have explored the use of the Atlantic City Convention Center as the location for our first U.S. world-class data center.”*

**Michael Tobin, CEO  
Continent 8 Technologies**

Continent 8, a worldwide leader in managed hosting, connectivity, cloud and security services, chose Atlantic City for its first world-class data center in the United States because New Jersey is leading the charge for regulated internet gaming and sports wagering. Continent 8 also chose this geographic area because there is a need for a more robust technological infrastructure. Our hope is to make this location the epicenter for internet and sports wagering while providing much needed technology services to the greater South Jersey community. The help the ACEA provided throughout the process was invaluable. We look forward to a continued partnership with the ACEA and the region as we embark on a new technological era!
